

Hanger Instructions

Shaded area has adhesive backing. Do NOT touch the adhesive area after removing the white release paper.

1. Sublimate product and let it cool PRIOR to applying hanger.
2. Determine where you are going to place the hanger. Hangers should be centered so that there is an equal weight distribution on both the left and right side of the product. Use a ruler to measure to determine the center of the sign. Also, you must place the hanger down from the top edge so that it is hidden when hung on the wall.
3. Remove white release paper from hanger.
4. Place hanger on the product at the pre-determined position and press firmly on the adhesive-backed area of the hanger. Use the rounded end of a pen cap or permanent marker cap to burnish the adhesive-backed area to ensure good adhesion.
5. DO NOT attempt to reposition this hanger once it has been applied — it will not have good adhesion if it is repositioned.
6. Allow hanger adhesive to cure for 24 hours before use.
